

Profile Summary

Engineering leader with extensive experience in AI, mobile development, driving cross-functional feature delivery, architectural improvements, and team mentorship. Passionate about leading and scaling high-performing engineering teams to deliver impactful technology solutions. Need visa sponsorship. Have approved i-140

Technical Competencies

- Programming Languages: Objective-C, Swift, C++, Typescript, Javascript, C#, JAVA, and C
- Framework: Cocoa Touch, React Native, Windows Presentation Foundation, and .NET 4.x
- Platform Development Experience: iOS, macOS, Windows, and Android

Professional Experience

Senior Software Engineer, *Amazon*, Seattle, WA, USA

Dec 2021 – Present

Engineering Lead for Mobile Team. Served as bar raiser for code reviews, hiring and change management processes.

AWS Wickr, Secure Client Engineering Team

- Directed mobile efforts for AWS Bedrock Integration, Encrypted Meetings and secure messaging architecture, aligning product goals with scalable, privacy-first design across platforms on mobile apps.
- Redesigned Core Data threading model to improve app responsiveness by 75%, introduced adaptive video scaling and reduced app launch times, strengthened system reliability, and drove engineering best practices for scalability and high performance.

AWS Chime Meetings, Mobile Engineering Team

- Led cross-functional engineering teams to deliver key mobile initiatives including New Meeting Join Flow, Account Deletion, and React Native - MonoRepo, improving delivery velocity, and customer experience.
- Mentored engineers (L4–L5), drove hiring, conducted design reviews, and owned execution for high-impact technical programs spanning performance, compliance, and platform modernization.

Software Engineer, *Microsoft*, Redmond, WA, USA

Feb 2016 – Dec 2021

Microsoft Teams iOS Core Engineering Team

Delivered several key features and owned Authentication

- Led architecture and development of multi-account authentication, improving app performance by 37% and enabling seamless identity management across accounts and organizations.
- Defined and implemented complex authentication strategies across multiple enterprise backends, owning Silent and UI-based workflows, MDM/MAM compliance, and scaling Silent authentication to 8B+ daily events.
- Championed adoption of phone-based and brokered authentication methods, elevating mobile security standards and enhancing user experience for millions of monthly active users globally.

Education

M.S. in Game Design and Development – Rochester Institute of Technology, NY

CGPA: 3.85

Courses: Artificial Intelligence, Prototyping, Engine Development, Graphics Programming, Mobile Engineering

Academic Project: Ambiguous Utopia, a real time music-influenced action shooter with tower defense

Bachelors in Engineering (Computer Engineering), 2012 – University of Mumbai, India

First Class

Courses: Robotics & AI, Soft Computing, Human Computing Interaction, Distributed Systems, Algorithms

Academic Project: W-Cloud, a real time file sync app with access on Phone from Remote Windows Client
